

For our German subsidiary we are currently looking for a

Senior Development Engineer/ Senior Entwicklungsingenieur (m/w)

Do you enjoy working in a creative team? Would you like to make your product visions come true and share your ideas within our engineering team in a rapidly growing international company?

In this position you will work closely with other engineers throughout the company as well as with our partners and customers on challenging projects to bring a product from concept through clinicals.

Your tasks could be:

- Develop and build prototypes (Draft, CAD and hands on)
- Material research and customer interaction/ feedback
- Create Project plans according to our customers needs
- Development of new processes for new or existing products together with the team of engineers, assistants and QC representatives
- Project management after appropriate time and experience within the company and medical industry.
- Document any new product and process with our R&D assistants and within our PLM system

We ask for:

- Degree in biomedical or mechanical (plastics) engineering
- excellent written and spoken English
- A minimum of 7 years proven medical device experience with design (CAD) & process development for medical products, implants or catheters as well as project management skills
- medical device standard knowledge

Travel requirements:

- The majority of the work will be spent on-site with occasional travel activities to customers or study locations throughout the world
- Passenger cars driving license needed

Do you want to become our new team member and enjoy the infrastructure around our development team? Then please send your *ENGLISH* application or refer further questions to jobs@contract-medical.com.
