

For our German subsidiary we are currently looking for a

**Development Engineer/
Entwicklungingenieur (m/w)**

Do you enjoy working in a creative team? Would you like to make your product visions come true and share your ideas within our engineering team in a rapidly growing international company? Together with our customers and notified bodies we work on devices for treatments of the human body which require technical understanding and good documentation practises.

In this position you will work closely with other engineers throughout the company as well as with our partners and customers on challenging projects to bring a product from concept through clinicals.

Your tasks will be:

- Develop and build prototypes (Draft and hands on)
- Material research and customer interaction/ feedback
- Development of new processes for new or existing products together with the team of engineers, assistants and RAQA representatives
- Document any new product and process with our R&D assistants and within our PLM system

We ask for:

- Degree in biomedical or mechanical (plastics) engineering
- excellent written and spoken German and English
- A minimum of 2 years industry experience with design & process development in a highly regulated industry or environment
- Medical product/ catheters and medical device standard knowledge preferred

Travel requirements:

- The majority of the work will be spent on-site with occasional travel activities to customers or study locations throughout the world
- Passenger cars driving license needed

Can you imagine working in our environment? Then please send your ENGLISH application or refer further questions to jobs@contract-medical.com.
